

# CASE STUDY

## ■ WII WALL - JUBILEE LIBRARY

### BRIEF

Portsmouth had started working with Jubilee Library as they were looking to refresh and update some of the areas in their award winning building.

### SOLUTIONS

The library wanted to set up a games console area in the Young Children's section to attract in children that may not usually visit a library and to help promote fitness to them. We were asked to design and produce a unit that would be suitable in terms of use but also that had the right look for this area.

Our design department then came up with the drawings for this using 2D & 3D renders to enable our client to see exactly what this would look like prior to being commissioned.

The final result was a 2m tall Wii Wall that incorporated a 42" Plasma TV with external speakers and the visual blue glow all around the wall. The unit houses the Wii unit and also a DVD player to enable them to show films or play information.
